

Ford
THE UNIVERSAL CAR

Another
Hand for
Business

Southern Auto Co.

J. D. HUDGINS, Mgr.

The Ford truck is just another arm and hand to the business man, adding through its manifold usefulness to the possible volume of his business, and at the same time doubling the value of every hour. In so many ways its all round utility serves the urgent demands of business—big and little—the retailer and wholesaler, the manufacturer and consumer, the contractor and farmer. Everywhere where business exists there is a present want for Ford trucks. Consider the low price. Let's talk it over with YOU.

WHAT TO DO WHEN CATTLE BLOAT.

With the approach of the season at which bloating of cattle frequently occurs, the Bureau of Animal Industry of the United States Department of Agriculture calls attention to the principal causes of the trouble and also the means by which it may be avoided. Many a cow has come to an untimely end because she, became dissatisfied, broke down the fence that surrounded a field containing a more luxuriant growth, and stuffed herself with luscious, stolen greens until she lost all desire for another mouthful.

Soon her troubles begin. Fermentation develops in the mass of corn or clover, and gas forms that fills the first stomach of the cow to its utmost capacity.

The danger to the animal from

acute bloating is not that the distended stomach will rupture, for such an accident is almost unknown. The pressure of the gas distended stomach, however, exerts a dangerous pressure upon the heart and lungs, with the result that animals dying from acute bloating usually die of strangulation through inability to breathe with their compressed lung tissue.

The stock owner should guard against the bloating of his cattle with every precaution at his command. Clover, or other green vegetation, if eaten when wet by dew or rain, seem to be especially liable to ferment before leaving the stomach of the animal that has been fed upon them. Eating excessive amounts of middlings or corn meal will also cause bloating. It also occurs in cattle as a result of becoming choked. The principal cause, however, is over-eating from succulent green forage, such as

clover, green corn, or cabbage.

To prevent bloating in cattle, the animals should be shifted by easy stages, from dry or scanty feed to abundant and luxuriantly growing fodder. They may be allowed to feed from the green forage for only three-quarters of an hour on the first day they are given access to such grazing. A full hour may be allowed on the second day, and by continued slow steps and gradually lengthening stay in the tempting feed, the danger of loss from bloating will be largely overcome.

But in case the first evidence of a too protracted stay in the heavy growth of forage should be that the owner notices one of his animals with sides distended, and perhaps even lifted above the level of the backbone, he must act quickly. Removal of the gas from the paunch will quickly bring relief. If a veterinarian is within reach, he should be summoned at once. If no surgeon is available the owner should immediately attempt to bring relief to his animal.

Many cattle owners keep a trocar and canula constantly on hand and thoroughly understand its use. The trocar is a sharp-pointed rod provided with a metallic sheath or canula which leaves the point of the trocar exposed. The spot to be selected for inserting the trocar is a point equally distant from the last rib, the hip bone, and the lateral bony projections from the spine, in the region of the loins. Here a small cut about three-quarters of an inch long should be made through the skin with a small knife, and then the trocar with the canula attached may be pushed through the cut into the paunch. The trocar is then removed, allowing the gas to escape through the canula. The canula should be retained in place so long as any gas escapes through it. Sometimes several hours are necessary, and the canula should be firmly tied in place. An attendant should remain near the animal, if possible, so long as the canula is in the paunch.

If the animal is not distressed by the bloating, and the swelling of the body is not great, or when the alarming conditions have been removed by the use of the trocar, it is best to resort to internal medicine to allay the formation of gas. Two ounces of aromatic spirits of ammonia in two quarts of cold water should be given every half hour until the pressure of the bloating has been removed. A dose of purgative medicine is usually beneficial after the bloating has disappeared. For this purpose one pound of Glauber's salts will usually prove effective. —Ranch and Farm Exchange.

W. H. Mukane has torn down the old burned building which was such an eye-sore for some time to passers-by, on Stevens street, east of Joyce-Pruit's building. Aside from looking bad, the old buildings are dangerous to children playing about and should be torn down as soon as may be after a fire.

New Boll Weevil Poisoning Machine

The limiting factor in the cotton weevil control by poisoning is the lack of machinery for dusting powdered calcium arsenate, the only poison that has been found sufficiently effective. There is a shortage of calcium arsenate, but the machinery obtainable is not sufficient to handle the quantity of poison available. There are only two types of dusters, a small hand affair that cannot be used successfully on more than 40 acres of cotton, and a large power machine that is too expensive for use on less than 200 acres of cotton in a body. The main need is for an intermediate type of duster, suitable for use by cotton growers whose plantings run from 50 to 200 acres. Such a machine is in the course of construction by the United States Department of Agriculture at the Delta Laboratory Tallulah, La., and will be on the market for the cotton growing season of 1920. It will be one operated by wheel traction, will cost about \$75.00, and will cover in the neighborhood of 20 acres per day.

—Ranch and Farm Exchange.

Boll Weevil Taking Heavy Toll.

The heaviest "first crop" infestation of cotton boll weevils on record is now general in all counties of Mississippi south of Tupelo and Clarksdale, according to the field agent of the United States Department of Agriculture. The weather favors still further propagation. Many farmers, because of the production of the past two years, believed that they could henceforth grow cotton without fear of this pest. The department has, of course, continued to advocate the growing of cotton under precautions against weevils and is now pushing such control measures as are available.

This is simply a warning, that should we have favorable weather conditions here for the growth of the boll weevil, we may have the same conditions existing as they have now in the state of Mississippi.

Leadership

The world today needs trained, loyal leaders. Notwithstanding that less than one-half of one per cent of the population of the United States is enrolled in colleges and universities, college men and women have predominated remarkably in leadership. College and university enrollment should be doubled for the good of the country. The University of New Mexico invites ambitious young men and women to prepare for leadership.

Opportunities

The University is undergoing reorganization and betterment. Special attention will be devoted to the conservation of the health of students. A new Department of Hygiene, supported in part by Federal Appropriation, will be in operation. Nearing completion is the new building for Practical Mechanics. Instruction offered in Mathematics, Biology, Chemistry, Physics, Geology, History, Political Science, Economics, Business Administration, Home Economics, Education, Hygiene, Psychology, Philosophy, Physical Training, Music and Languages, including English, Spanish, French, Italian, Latin and Greek. Courses preparatory to Law, Medicine, and Mechanical Engineering. Curricula in Chemical, Electrical, Civil, and Geological Engineering.

Regular Courses leading to the Degrees:
Bachelor of Arts
Bachelor of Science
Master of Arts

Reservations

Residential accommodations are limited. Prospective students should immediately address inquiries and requests for reservations to

Methodist Doings.
Monday night at the Methodist church, the fourth quarterly conference of the local body was held. Rev. J. B. Cochran, presiding elder, in the chair. As is customary, the election of stewards of the church for the coming conference year, was held at that time, with the following result: C. F. Wright, J. F. Flowers, J. F. Hart, P. E. Little, D. G. Grantham, W. P. Mudgett, A. L. Allinger. J. F. Flowers was chosen recording steward and Claude Wright district steward. A new departure was the election of a woman to serve on the board of stewards. The choice fell on Mrs. M. L. Davis. This lady enjoys (?) the distinction of being the first woman to be elected to serve in that capacity in the Methodist church of Carlsbad.

re-elected Sunday school, superintendent, with Claude Wright, assistant. J. H. Zimmerman is charge lay leader. The affairs of the church are in good hands, the pastor, Reverend Givan, closing up his second year successfully. The assessment for the benevolences of the church will be paid in full although increased considerably over those of former years.

Silver City Normal School.
With dormitory accommodations on the campus all filled the officials of the New Mexico normal school this week rented and furnished four residences for use during the winter term of the school. As all the students have not yet arrived still another house may be required and those in charge have another in view to use if required.—Enterprise.

IN BUSINESS FOR YOUR HEALTH

Camels are sold every-
where in scientifically
sealed packages of 20
cigarettes or ten pack-
ages (200 cigarettes)
in a glassine-paper-
covered carton. We
strongly recommend
this carton for the
home or office supply
or when you travel!
R. J. Reynolds Tobacco Co.
Winston-Salem, N. C.

18c a package

CAMELS are the most refreshing, satisfying cigarette you ever smoked! Put all your cigarette desires in a bunch, then buy some Camels, give them every taste-test and know for your own satisfaction that in quality, flavor, smooth-body and in many other delightful ways Camels are in a class by themselves!

Camels are an expert blend of choice Turkish and choice Domestic tobaccos. You'll not only prefer this blend to either kind of tobacco smoked straight, but you'll appreciate the remarkable full-bodied-mildness and smooth, refreshing flavor it provides! Camels are a cigarette revelation!

Camels win you in so many new ways! They not only permit you to smoke liberally without tiring your taste but leave no unpleasant cigarettey aftertaste or unpleasant cigarettey odor!

Compare Camels with any cigarette in the world at any price! You'll prefer Camel quality to premiums, coupons or gifts!
